

OMEGA ANCILLARY EQUIPMENT

OMEGA Pre-Feeder

OMEGA Pre-Feeder is an independent machine for smooth and high speed blank feeding for cardboard and corrugated material into folder gluers. The Omega Pre-Feeder has a wide range of models; 55 – 90 – 110 – 145, works in synchronization with the main line and can be integrated to all folder gluers.

OMEGA Turnpro

OMEGA Turnpro is a separate module which turns the direction of the carton flow by 90° on the folder gluer and is a significant value-add feature. It is developed for producing specific cartons, such as chocolate boxes, for high speed production in a single pass.

Omega Turnpro can be incorporated on Omega Allpro and Omega Hi-Line folder gluers in the 90 – 110 – 130 – 145 width range. The machines with Turnpro can produce all standard carton styles like straight-line, auto-bottom, double wall, 4 & 6 corners in addition to the special carton styles they are designed for.

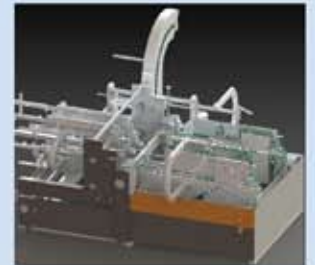

OMEGA Braille Embossing System

OMEGA Braille Embossing System is for efficient and high speed Braille embossing on Omega folder gluers. It is an economical solution as the embossing is performed separately on blanks. This servo driven system has two discs; the male disc plate can be designed to have dual or even triple embossing feature to reach the targeted high productivity. The location of embossing can be adjusted as required on any panel of the blank. The system works in synchronization with the folder gluer in the 35 to 90 cm width range, can be by-passed when embossing is not required and can also be integrated with quality assurance systems for Braille embossing.

OMEGA Ejection

OMEGA Ejection is a separate module after the final fold section of the folder gluer which allows for smooth and efficient ejection of faulty boxes detected by quality assurance systems. The detected cartons are ejected under the gluer and the section can also be incorporated with a waste conveyor system to avoid jamming after ejection under the folder gluer. The Omega Ejection can be integrated on all Omega Allpro and Omega Hi-Line folder gluers.

OMEGA Nick Breaker

OMEGA Nick Breaker is a specialty device which allows for high speed and efficient folding and gluing process of special design blanks, such as beverage multi-packs with nicks. It is a servo driven module which can be integrated on Omega Allpro and Omega Hi-Line folder gluers.

OMEGA Pack Station

Omega Pack Station is an independent machine for easy box collection after the folding and gluing process, works in synchronization with the main line and can be integrated to all folder gluers.
